Huddle - Demo Zone

When sharing and managing documents, coordinating multi-agency projects, and working with external partners, UK Government and public sector organisations use Huddle to improve efficiency, reduce risk and meet their security requirements.

Huddle offers a more secure way to share, manage and publish documents (up to Official Sensitive) across internal teams and external stakeholders. It is the largest provider of cloud collaboration and file sharing solutions on the G-Cloud Digital Marketplace and is used by 80% of central government departments, as well numerous local authorities and public sector bodies.

Create secure cloud-based Workspaces in seconds, keep users synchronised to the latest document updates, control access, and manage approvals all in one secure place.
